Let's set up your roster

The student roster allows you to easily track student progress on your dashboard.

Import students from your institution

It looks like you are connected to Moodle. GitHub Classroom can automatically import your roster for you!

Or, create your roster by listing students

Enter your list of students, **one per line**.

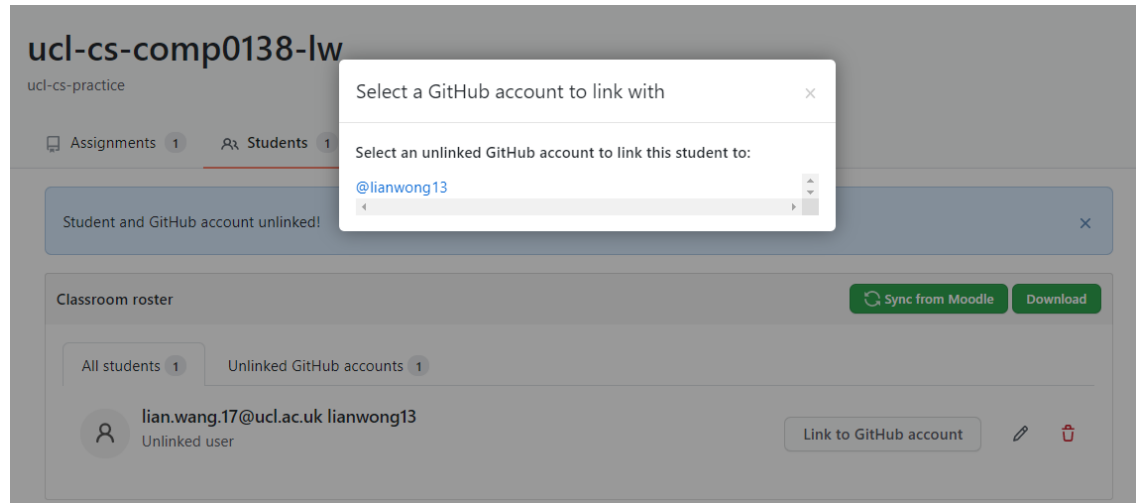

Student identifier

Create roster

- Try Import from Moodle, get:

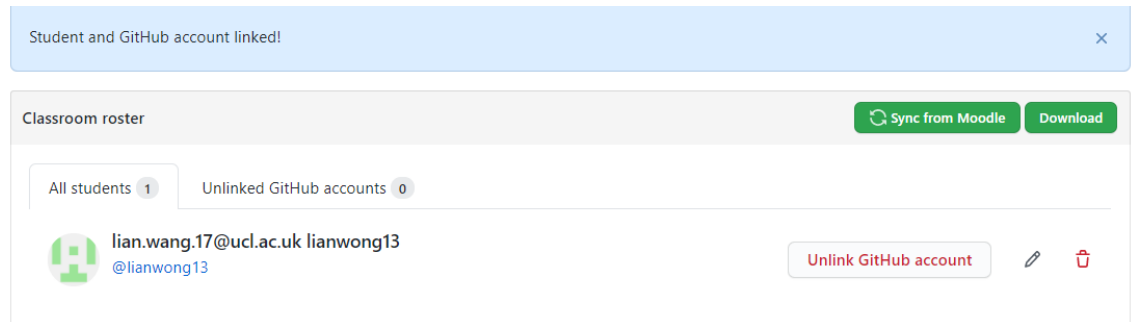

GitHub Classroom does not have access to your course roster on Moodle. Please ensure that you've allowed GitHub Classroom to retrieve your course membership from Moodle and try again. ✕

- Try to upload a txt file(roster) contains student's UCL email address and his/her GitHub account, get:

The pre-requirement of this process could work is the student is already added in the assignment.

- Link them

- Try to solve matching Moodle group to GH classroom group
 - Currently, the function for classroom owner to create groups is not available. A feasible way is to invite one student in each team and let that student create the team. Each team only need one student to create a team. Once the team is created, the classroom owner can allocate students to the corresponding groups. With the GitHub accounts already linked with their UCL email address, the students in Moodle groups can be added in the GH classroom groups accordingly.
